PREFABS

- "Arrows" - Just drag and drop to the scene, the object contains a script that will force the balls do make towards the direction of the arrows.

- "Ball" - Ball that destroyed depending on the situation.

- "BallParticles" - Particles that appear after the ball collision with a black box, and destroyed some time later.

- "BirdControllerCircle" - A bird which moves in a circle to increase the radius of the circle, simply drag the bird away from the center.

- "BirdControllerLine" - a bird that moves from marker to marker by changing the position of the marker you change the path of the birds.

- "Box" - Balls will be broken after the collision with the object.

- "Box1" - Simple platform.

- "Curtain" - Curtain is controlled not by the object itself.

- "PauseButton" - Pause menu.

- "Peas" - It creates a ball at a certain point after a certain time.

- "Target" - To the level of the end in this place should get 10 balls.

- "Teleport" -If one of the teleporters hit a ball that moves the ball teleport to another teleporter.

- "TriggerFallBall" - Ball destroyed when hit by the object.

And :

To start playing, you need to decide with control. For this is the object of "SelectControl" in the scene "Menu", select a script in there that you need. To avoid errors, do not choose with two controls.
